

Meeting 7

This is the summary of the meetings held with representatives from Institute B. The table summarizes the purposes, main topics discussed, and outputs of the meetings.

Seventh meeting	
Stakeholders	Institute B; representative B1 and B2.
Topics of discussion	Terminology on agriplastics. Alignment between the terminology proposed by the ClimOO Ontology suite and the that of Institute B.
Take-home messages	We employed the ClimOO Ontology suite, specifically the PlasticO module, to clarify Institute B vocabulary with respect to: • The distinction between plastic objects and related constitutive materials. • The distinction between synthetic and natural polymer-based materials. • Different types of polymer-based materials, including elastomers, thermoplastic and thermosetting materials. • Material compositionality and polymeric compounds. • Bio-baseness and biodegradability. The vocabulary turned out to be 1) clearer and more articulated, 2) less ambiguous, 3) endorsing the conventional meanings adopted by subject matter experts for such terminology, and 4) aligned with the ClimOO Ontology suite vocabulary. For reasons of confidentiality, we currently do not provide details on the Institute B vocabulary.
Framework of reference on sustainability and plastics	• The ClimOO Ontology suite. • Labelling and product descriptions from South Tyrolean market agriplastic products.
